

API Verification Proof

This document provides direct visual proof that the backend API is fully functional, handles errors gracefully, and implements the required performance routing.

1. Successful User Creation (201 Created)

Proof that the API successfully connects to the database, registers a new user, and returns the correct 201 status code along with the user object.

The screenshot displays the Thunder Client interface with a new request configured for a POST method to the endpoint `http://localhost:3000/api/auth/signup`. The request body is set to JSON and contains the following data:

```
1 {
2   "email": "oshadhi.test98@gmail.com",
3   "password": "SecurePassword123!",
4   "name": "Oshadhi Dev"
5 }
```

The response status is **201 Created**, with a size of **1.03 KB** and a time of **861 ms**. The response body is JSON and contains the following data:

```
1 {
2   "user": {
3     "id": "f8f6a86f-64a4-4ac6-9bf6-062013e159c6",
4     "aud": "authenticated",
5     "role": "authenticated",
6     "email": "oshadhi.test98@gmail.com",
7     "email_confirmed_at": "2026-05-24T05:27:30.559852168Z",
8   }
9 }
```

The bottom panel shows the terminal output for the command `npm run dev`, displaying several successful GET requests to `/api/projects` and an error message for a duplicate user registration attempt:

```
PS C:\Users\Oshadhi\Desktop\taskflow> npm run dev
GET /api/projects 200 in 461ms (next.js: 3ms, application-code: 458ms)
[Cache] Returning cached projects for user: 25accb12-42a2-494f-9de2-431e6b936f4d
GET /api/projects 200 in 139ms (next.js: 3ms, application-code: 137ms)
[Cache] Returning cached projects for user: 25accb12-42a2-494f-9de2-431e6b936f4d
GET /api/projects 200 in 141ms (next.js: 2ms, application-code: 139ms)
[Cache] Returning cached projects for user: 25accb12-42a2-494f-9de2-431e6b936f4d
GET /api/projects 200 in 111ms (next.js: 2ms, application-code: 109ms)
[AuthRepository.signUp] Error: Error [AuthApiError]: User already registered
at async Object.signUp (repositories/authRepository.ts:8:52)
```

2. Successful User Sign-In (200 OK)

Proof that the API successfully authenticates the existing user, validates credentials, and returns a secure access token session.

The screenshot displays the Thunder Client interface with a REST client request configured for a POST method to the endpoint `http://localhost:3000/api/auth/signin`. The request body is in JSON format, containing the following data:

```
1 {
2   "email": "oshadhi.test98@gmail.com",
3   "password": "SecurePassword123!"
4 }
```

The response status is **200 OK**, with a size of **2.13 KB** and a time of **903 ms**. The response body is in JSON format, showing a session object with an access token:

```
1 {
2   "session": {
3     "access_token":
4       "eyJhbGciOiJIUzI1NiIsImtpZCI6IjM3YWYyY2RjLTNmMTYxNDM3
5       Ny1iODkzLTc4MDc5ZDQxYTc4ZiIsInR5cCI6IkpXVCJ9
6       .eyJpc3MiOiJodHRwczovL2Jham94ZXlpZWdvY3J6bmV3Y2V1LnN1
7       cGFiYXNlLnNvL2F1dGgvdjEiLCJzdzWiOiJmOGY2YTg2Zi02NGE0L
8       "
9   }
10 }
```

Below the response, the terminal output shows the results of running `npm run dev` in the project directory:

```
PS C:\Users\Oshadhi\Desktop\taskflow> npm run dev
GET /api/projects 200 in 461ms (next.js: 3ms, application-code: 458ms)
[Cache] Returning cached projects for user: 25accb12-42a2-494f-9de2-431e6b936f4d
GET /api/projects 200 in 139ms (next.js: 3ms, application-code: 137ms)
[Cache] Returning cached projects for user: 25accb12-42a2-494f-9de2-431e6b936f4d
GET /api/projects 200 in 141ms (next.js: 2ms, application-code: 139ms)
[Cache] Returning cached projects for user: 25accb12-42a2-494f-9de2-431e6b936f4d
GET /api/projects 200 in 111ms (next.js: 2ms, application-code: 109ms)
[AuthRepository.signUp] Error: Error [AuthApiError]: User already registered
    at async Object.signUp (repositories\authRepository.ts:8:52)
```

3. Secure Endpoint Execution (200 OK)

Proof of successful sequential endpoint testing, including the required GET /api/projects route execution using the Authorization Bearer token.
